

The screenshot shows a web browser's developer console with the 'Console' tab selected. The left sidebar shows a summary of log messages: 11 messages, 10 user messages, 4 errors, 1 warning, 6 info, and a 'No verbose' toggle. The main console area displays the following:

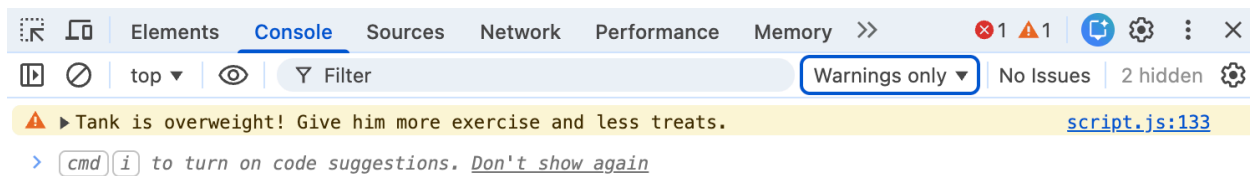

- Pet Name: Tank, Pet Weight: 68, Pet Happiness: 100, Pet Sleepiness: 30 [script.js:129](#)
- Warning: Tank is very sleepy! Give him more sleep time and less exercise. [script.js:141](#)
- Error: Tank can not turn into a frog! [script.js:146](#)
- Table with 2 columns: (index) and Value.

(index)	Value
Name	'Tank'
Weight	0
Happiness	55
Sleepiness	210
- Object
- Group: Pet Health Check [script.js:159](#)
 - Sleepiness: 210 [script.js:160](#)
 - Happiness: 55 [script.js:161](#)
 - Weight: 0 [script.js:162](#)
- 55 [script.js:171](#)
- Error: GET <https://jsonplaceholder.typicode.com/pets/Tank> 404 (Not Found) [script.js:185](#)
- Error: TypeError caught: TypeError: Cannot read properties of undefined (reading 'someProperty') [script.js:199](#)
 - at HTMLButtonElement.clickTypeError ([script.js:197:35](#))
 - at HTMLButtonElement.dispatch ([jquery-2.2.1.min.js:3:7516](#))
 - at r.handle ([jquery-2.2.1.min.js:3:5597](#))
- Error: ReferenceError caught: ReferenceError: undeclaredVariable is not defined [script.js:208](#)
 - at HTMLButtonElement.clickViolation ([script.js:206:24](#))
 - at HTMLButtonElement.dispatch ([jquery-2.2.1.min.js:3:7516](#))
 - at r.handle ([jquery-2.2.1.min.js:3:5597](#))

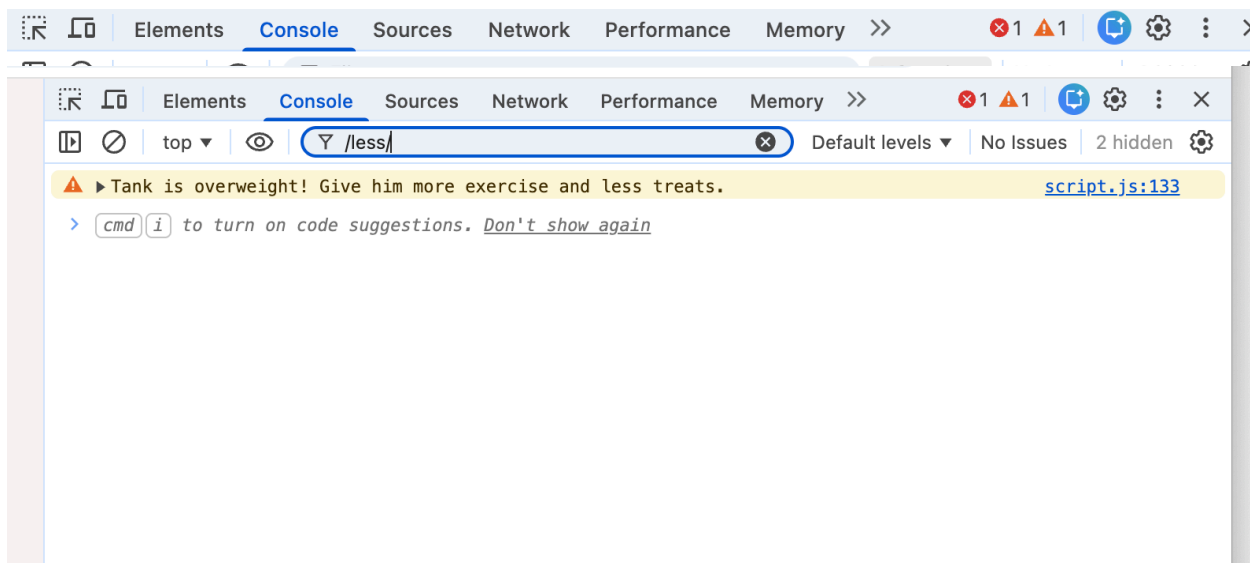

Displays log info, log warning, log error, log table, log group, log custom, cause 404 error, cause TypeError, cause Violation

The screenshot shows the same web browser's developer console, but with the 'Errors only' filter applied. The console now only displays the error message: Tank can not turn into a frog! [script.js:144](#). Below the error message, there is a prompt: > `cmd` `i` to turn on code suggestions. Don't show again.

```
function clickedTreatButton() {
  // Increase pet happiness
  // Increase pet weight
  // Introduced a bug to track and then fixed it by changing the code to update the pet
  // instead of taking it in as a string from the HTML and trying to add to it, which w
  // concatenation instead of addition because it was treating the weight as a string i
  var currWeight = parseInt($('.weight').text());
  pet_info['happiness'] += 10;
  pet_info['weight'] = pet_info['weight'] + 5;
}
```
